No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                  carbohydrate present in the barley endosperm. The invention provious barley based foodstuff which comprises a recombinant carbohydrate degrading enzyme improving the nutritional value of the foodstuff The present sequence is barley recombinant, thermostable (1,3-1,4)-beta-glucanase enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a food stuff comprising barley feed and transgenic barley malt where the transgenic barley malt comprises a recombinant carbohydrate degrading enzyme comprising a (1,3-1,4)-beta-glucanase. The food stuff is useful to feed animal, preferably chickens Barley is cheaper than corn, the principal foodstuff of chickens. Chickens cannot efficiently utilise barley as an energy source as they do not possess a gut enzyme that depolymerises beta-D-glucan, major carbohydrate present in the barley endosperm. The invention provides a carbohydrate present in the barley endosperm. The invention provides a
                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New barley based foodstuff for animals, i.e. chicken comprising recombinant carbohydrate degrading enzyme (1,3-1,4)-beta-glucanase

                                                                                                                                                                                                                                                                                                                      This hybrid protein is encoded by the beta-glucanase-H1 gene. Following processing of the signal peptide the mature protein is produced, comprising the amino terminus of the amylolique-faciens beta-glucanase and the carboxyl-terminal half of the B.maccarans beta-glucanase. This hybrid protein is thermostable and hydrolyses beta-glycosidic linkages in (1,3-1,4)-beta-glucanase Reducing sugars are obtd. at high temps. and thus this enzyme can be used in the mfr. of food prods., esp. beer and animal feed (eg. for feeding sugars are obtd.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure;

                                                                                                        Thermostable
                                                                                                                                                                                                                                                                                                                                                         The present sequence is a protein sequence from a soil bacterium for enzyme with lichenase/endo-1,3/1,4-beta-glucanase (E.C. 3.2.1.73) activity. The enzyme is useful in brewing and for degrading beta-glucanases that cause problems during filtration.
                                                                                                                                                                                                                                                                                                                                                                                                                Producing nucleic acid encoding lichenase, useful for producing enzymes for improving filtration in brewing, comprises isolating the nucleic acid from soil bacteria .

The corresp. gene and the plant promoter region are inserted into expression vector and used to transform barley cells. The transform used to regenerate barley plants which are useful in brewing.

        This hybrid protein is encoded by the beta-glucanase-H2 gene. Following processing of the signal peptide the mature protein is produced, comprising the amino terminus of the B.macerans beta-glucanase and the carboxyl-terminal half of the B.amylo-liquefaciens beta-glucanase. This hybrid protein is thermostable and hydrolyses beta-glycosidic linkages in (1,3-1,4)-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       protein accumulates proportion of these

      This sequence is the lichenase (licA) of Orpinomyces sp. strain PC-2 of the invention. The protein was purified from a fungus or a fungal culture or from a recombinant DNA molecule having a fungal lichenase coding sequence. The lichenase enzyme hydrolyses the beta-1,4-glucan bonds adjacent to beta-1,3-linked glucan bonds, but does not cleave beta-1,4-linked glucans. They can be used for the treatment of animal beta-1,4-linked glucans. They can be used for the treatment of animal beta-1,4-linked glucans.

                                 The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                           Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms -

The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from pla with nucleic acid or amino acid sequences from non-plant organisms witable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant
                                                                                                                                                                                                                Identifying plant target comprising aligning and of from plant with nucleic a
                                                                                                                                                    Claim
                                                                                                                                                                                            organisms
                                                                                                                                                                                                                                                                                                                                              Tietjen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    07-FEB-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WO200210210-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Arabidopsis thaliana.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Protein identification; signal transduction pathway; metabolic hybridisation assay; genetic mapping; gene expression control; termination sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAG52114
                                                                                                                                                                                                                                                                                                                                                                                                                                            25-FEB-2000;
